

SNMP Plug-in Management Controller Type SMU-4000

Features:

- **Plug-in SNMP option for IRT 4000 series cards**
- **Programmable Management Information Base (MIB) to suit intended module**

General:

The SMU-4000 is a Simple Network Management Protocol (SNMP) plug-in interface option for IRT 4000 series modules when used in IRT's 4000 series frames.

The SMU-4000 is programmed with a Management Information Base (MIB) suitable for the type of module that it is to be plugged into.

IRT 4000 series cards that are SNMP upgradeable need the SMU-4000 plug-in module programmed with their own relevant MIB to be recognisable by the SNMP system.

The SMU-4000 acts as an interface between the module that it is plugged into and the [CDM-4000](#) SNMP Agent within the 4000 series frame. Module conditions such as alarm states or signal conditions are communicated to the SNMP Network Management System (NMS) via the [CDM-4000](#) SNMP Agent. Likewise control commands are communicated from the NMS, to the SNMP Agent, to the relevant module via the SMU-4000 plug-in module.
